

Here are the results of the exam.

There were 50 points to be had, distributed on the four problems as follows: 6, 18, 18, 8. (The average numbers of points obtained were 2.4, 12, 12.2, 3.9, respectively.)

The best results obtained where 47 and 45 points, showing that the exam, while certainly long, was definitely doable. (The next best results were 41.5 and 40.5 points.) Despite this, I graded the exam as if the total number of obtainable points had been 45, one reason being that problem 1 was done quite badly. Thus the mark of the exam would be obtained as POINTS / 45 * 10 (rounded to the next half integer excluding 5.5). However, I computed the final mark from the unrounded result of the exam and the unrounded average mark for the homework, weighted according to 60 / 40. (Mastermath forbids weighing the homework with more than 40%).

I hope everyone can find him/her-self in the table below. If not, contact me by e-mail.

Likewise, those who have not passed should contact my by e-mail to make arrangements for an oral retake exam. The date can be fixed according to your convenience. (The date next week provided by Mastermath is irrelevant since the retake will not be a written exam.)

Stud.Nr.	Pts	Exam	Homew.	Final
1024469	41.5	9.22	9.9	10
1052659	19	4.22	6.1	5
